About *PowerTech*TM.....

*PowerTech*TM was incorporated in 1968 with a single objective of satisfying the increasing demand for high current, high power silicon transistors for the military and aerospace power supply market. We provide high grade industrial and military type devices with current ratings from 10 to 2400 amperes and voltage rating from 60 to 250 volts. All devices feature ultra-low forward voltage drops.

Now under new management, *PowerTech*TM will stay true to its heritage by continuing to provide the market with the same high current, high power silicon Power transistor products just as we have done for over 45 years.

Fast forward to today and that same objective still defines *PowerTech*TM. However, today our focus is sustainment of the more than 50 critical military systems that need to be supported and maintained. *PowerTech*TM has spanned over 45 years supplying the same high current, high power silicon transistors. The need for our proprietary products is as critical today in the support phase of the weapon systems that use our products as they were more than 45 years ago in the development phase of those same systems.

*PowerTech*TM currently fabricates our own die which are used in our products. All products were designed with and utilize the largest military qualified power transistor chips available. *PowerTech*TM proprietary metallization techniques enable the products to have superior electrical characteristics critical in power conversion applications. Since *PowerTech*TM products were originally designed for the demanding needs of the military and aerospace markets, inherent reliability has been designed in, rather than tested in.

Typical applications for *PowerTech*TM products include aircraft inverters, servo amplifiers for armament controls and motor speed controls, as well as power suppliers for airborne radar and electronic countermeasure equipment.

*PowerTech*TM products are designed into many critical weapon systems currently supported today by our Military. The B-52, AN/AQS 13 and 18, F-16, Bradley Fighting Vehicle, Cruise Missile, Apache Helicopter, Munition Systems, ASPJ and ALQ/131 are a few of the critical systems we still support today.

Our Technology.....

There is an old saying that “they just do not make them like they used to,” which usually refers to the quality of a product as compared to when it was first introduced. Here at *PowerTech™*, we can proudly say that we still make them like we used to. It starts with our proprietary single diffused wafer technology. *PowerTech™* fabrication process yields the lowest $V_{CE(SAT)}$ rating of any competing product in the market today. The lowest $V_{CE(SAT)}$ means the highest efficiency, which is extremely important for transistor operation above 30 Amps. In comparison to our competition’s product, which has a $V_{CE(SAT)}$ in excess of 1.5V, *PowerTech™* transistors have a $V_{CE(SAT)}$ rating less than 0.75V at anywhere between 50 to 300 Amps. To achieve this, we use extra-heavy copper metalizing on our die thereby assuring maximum thermal and electrical conductivity yielding us the lowest $V_{CE(SAT)}$.

TYPICAL PRODUCTS		
$V_{CE(SAT)}$ Max.	VCE	PowerTech P/N
0.5V @ 300A	80V	PT9502
0.35V @ 200A	120V	PT9503
0.75V @ 70A	120V	2N5927

GUARANTEED SOA

Compared to our competition, their chips utilize a thin aluminum metallization with fragile, current limiting wires, whereas *PowerTech™* product uses solid copper posts to achieve our superior performance rating.

When designing with a power transistor, high voltage and current specs are not enough. If you have ever specified a power transistor above 50 amps, only to find it fail on the job, you know how high current specs may actually be misleading. The truth is, unless you see the SOA and $E_{S/B}$ specifications of the transistor, there is no way of knowing whether a high current device has the guts to withstand a surge, and not blow out. This is why we publish both our Safe Operating Area and $E_{S/B}$ specifications for all our products. We want you to see the kind of superior performance you can expect from only *PowerTech™* high power transistors. Compare our $E_{S/B}$ ratings from 1.5 to 6 joules, against the millijoules or unpublished ratings of other high current/voltage devices to see the difference.

TYPICAL PRODUCTS			
Ic	VCE	$E_{S/B}$	PowerTech P/N
1200A	80V	6.0J	PT-5007
400A	120V	6.0J	PT-9503
50A	200V	6.0J	PT-7511

GUARANTEED SOA

Our extra heavy copper metalizing assures maximum thermal and electrical conductivity and yields the highest resistance to second breakdown with the lowest $V_{CE(SAT)}$. *PowerTech™* does not stop there. All die are mounted onto an integral moly-copper heat sink so we can categorize and pre-test our die at high currents to ensure maximum reliability in the final packaged device.

ANATOMY OF A POWER TRANSISTOR

Product Packaging.....

All *PowerTech*[™] transistors are designed to handle high currents with low losses. Heavy copper emitter/base metallization and large emitter periphery combine to keep $V_{CE(SAT)}$ low and maximize Safe Operating Area (SOA). A single *PowerTech*[™] transistor or Darlington circuit can often replace several paralleled transistors, lowering lead inductance and eliminating the need for power robbing matching resistors.

PowerTech[™] transistors are offered in hermetically sealed packages ideal for high reliability applications. All packages are designed with a large copper mounting base for efficient heat sinking to keep temperatures low and reliability high.

Designed to meet the demanding needs of the military and aerospace communities, *PowerTech*[™] transistors exceed the stringent reliability requirements of MIL-PRF-19500. This capability is guaranteed through careful design and 100% device testing and screening.

Standard and custom package designs are available for all *PowerTech*[™] products.

Our Products.....

PowerTech™ offers a wide range of high current, high power transistor and Darlington products. All products are designed and tested to ensure the highest quality and reliability standards are met. All products are 100% tested prior to shipment.

Legacy Products.....

PowerTech[™] has over 2,500,000 die in our inventory of older Solitron Devices “Single Diffused” Power Transistor product. From this inventory, *PowerTech*[™] can manufacture all of the Solitron part numbers shown below. In addition to our die inventory, *PowerTech*[™] also has more than one million finished products in stock available for immediate delivery. These products are available in standard TO-3 and TO-66 packages.
